### Department of Public Works – Street Division

#### Upham St. Asphalt Overlay Program

July 18, 2018

The City of Marshfield will be starting with our Asphalt Overlay Project on Upham St. (Chestnut Ave. to Oak Ave.) July 23, 2018. The project will consist of the Street Division repairing some of the curb and gutter along with some of the concrete street. There will also be some storm and sanitary sewer work done along with this project. It will take the Street Division 6 to 8 weeks to complete our part of the project. Once we have completed our part of the project, American Asphalt will start on their part of the project. American Asphalt will start with grinding off a couple of inches of concrete in preparation of an asphalt overlay of the street. When American Asphalt has completed paving Upham St., another contractor will be in to paint the crosswalks and centerlines of the street. American Asphalts part of the project will take an additional two weeks.

The City of Marshfield will be providing traffic control on Upham St. for this project. During the project, Upham Street will be reduced down to one lane of traffic going in **one direction only**. Traffic heading west from Central Ave. will be allowed to use Upham St. during the construction project. Traffic heading east on Upham St. from St. Joseph Ave will be **detoured** at Oak Ave. The Detour will run south on Oak Ave. to Ives St. The detour will then continue east on Ives St. to Central Ave. Then on Central Ave to the north until you come back to Upham St. Other detours may be posted as needed. Speed will also be reduced through the construction project on Upham St. (Oak Ave to Central Ave.) to 15 mph.

Any questions or concerns please contact the Street Division @ 715-486-2080
